Comments: The Interagency Coordinating Committee for the Validation of Alternative Methods was told by Congress last year to develop a five-year plan to identify areas of high priority. Among those areas of high priority are the development of non-animal methods of testing products.

Please accept internationally validated non-animal methods, including non-animal test methods for skin and eye irritation, phototoxicity, and pyrogenicity (fever induction), and to follow the additional December 2006 recommendations of the animal protection community.

Please end the practice of testing on animals!
Kindness instead of cruelty is a mark of human dignity.

Thanks!
